Subject: Formaldehyde URT cancer MOA
Attachments: FA URT cancer MOA_2015_v13_compiled.docx

Hello!

After having gone through all the recent formaldehyde hazard and MOA drafts that I've received or worked on over the past 3 months, I've now finished the process of reviewing and revising the formaldehyde URT cancer MOA section with the aim of identifying and resolving any apparent inconsistencies with these other relevant section. I also used this opportunity to tighten up arguments, where possible, and include references to pertinent information which wasn't cited before.

This version has the updated tables included, as well as MOA figures (similar to those in the last version, sent to you in July 2014).

Ex. 5 Deliberative Process (DP)

I'd like to get some feedback on those first ***HINT* *HINT***. I don't think that changing the figures will have any significant impact at all on the text, so at the very least the figures currently included should work for now.

I've highlighted the section, table and figure numbers which will need to be updated as you format the assembled draft. There are also several notes to you throughout the section, calling out various items as FYI. The last page has a brief annotation of things which may be useful in the description of potentially susceptible subpopulations.

Enjoy!

Jason
